SIEMENS 3<sup>150</sup>

Synco™ 700

## **Universal controller**

RMU7..B

- With yearly timeswitch
- Each type of controller is supplied with 5 different ventilation/air conditioning plants preprogrammed
- Freely programmable controller, for optimum adaptation to the relevant type of plant
- Modular expandable with extension modules RMZ785, RMZ787 and RMZ788
- Menu-driven operation with separate operator unit (plug-in type or detached)
- KNX bus connection for operation and process information.

#### **Application**

For use on basic to complex ventilation, air conditioning and cold water plants and primary air handling featuring communicative room thermostats.

The universal controllers are designed to handle the following controlled variables: Temperature, relative/absolute humidity, pressure/differential pressure, airflow, indoor air quality and enthalpy.

## **Functions**

# Timeswitch and operating modes

- Yearly timeswitch with automatic summer-/wintertime changeover.
- 7-day program (6 switching points per day) and yearly program for holidays/special days (16 periods).
- Selection of operating mode
  with local operator unit: auto, comfort, precomfort, economy and protection or via
  status inputs: Comfort, precomfort, economy and protection.
- Room controller combination with multiple ventilation controllers or heating controllers via the KNX bus. Exchange information such as room temperature, operating mode and setpoints.
- Display of the current operating mode (comfort, precomfort, economy and protection), including the reason for it

#### Setpoints

- Depending on the sequence controller: Individually adjustable heating and cooling setpoints (or maximum and minimum setpoints) for comfort and precomfort modes
- Predefined room temperature setpoint with room unit or relative setpoint adjuster (passive)
- Depending on the sequence controller: Predefined setpoint with absolute remote setpoint adjuster (active or passive)
- Room temperature setpoint with summer and/or winter compensation
- Depending on the sequence controller: Setpoint shift depending on a sensor, selectable start and end points

#### **Universal inputs**

#### 8 universal inputs for

- Passive or active analog input signals of the following measured values (°C, %, g/kg, kJ/kg, W/m², bar, mbar, m/s, Pa, and ppm, Universal 000.0, Universal 0000, pulse).
- Digital input signals (potential-free contacts)

## Additional I/Os through extension modules

Additional inputs and outputs to extend functionality.

Total max. 4 extension modules per RMU7..B can be connected.

#### Select from:

- max. 1 universal module RMZ785 (8 universal inputs).
- max. 2 universal modules RMZ787 (4 universal inputs, 4 relay outputs).
- max. 2 universal modules RMZ788 (4 universal inputs, 2 analog outputs, 2 relay outputs).

#### Data acquisition

## Pulse meter (for display only, not for billing purposes).

Two meters available to acquire consumption data.

Processes pulses from gas, hot water, low-temperature hot water, chilled water, electricity meters.

 Pulse metering (Wh, kWh, MWh, kJ, MJ, GJ, ml, l, m3, heating costs units, BTU, no unit).

## Trend data display

Four independent trend channels available to log measured values for a set period. KNX bus room temperature and outside air temperatures can be logged in addition to logical device inputs.

#### **Control functions**

- Sequence controller for 3 heating sequences (reverse acting) and 2 cooling sequences (direct acting), can be used as a controller providing P, PI or PID mode, or as a differential controller
- Controller can be configured as a room/supply air temperature cascade controller with limitation of the supply air temperature
- Each sequence can be assigned modulating control (modulating output, step switch, mixed air damper, heat recovery equipment) and a pump. Up to 3 sequences can act on the same analog control (e.g. priority cooling/dehumidification)
- General limitation function (minimum / maximum with PI mode per sequence controller, either as absolute limitation (e.g. for the supply air temperature or supply air humidity), or as relative temperature limitation (e.g. maximum limitation of the room/supply air temperature differential). Limitation acts on all sequences.
   Minimum limitation for switched on cooling (example: cooling with direct expansion cooler battery) can be set to a lower setpoint.
- Sequence limitation function with PI mode per sequence controller, can be defined as minimum or maximum limitation. Limitation acts on a single sequence (e.g. heat recovery anti-icing protection or maximum limitation of the air heating coil's return temperature)
- Lock individual sequences by outside air temperature.
- Messages about deviations of setpoint/actual value per sequence controller

## Switching and supervisory functions

#### **Fans**

Control and monitor supply air and extract air fan with preselected command, preselected command feedback signal and operating hours meter.

- Single-speed fan (recirculated air operation possible)
- 2-speed fan (lock the second speed per outside air temperature)
- Speed-controlled fan, including pressure or volume flow controller.

#### **Pumps**

Control and supervise up to 4 simple or twin pumps.

- Pump kick.
- Permanent ON for low outside air temperatures.
- ON after last sequence controller or per operating mode.
- Plant stop for pump fault depending on the outside temperature.

## **Heat recovery**

Control heat recovery.

- · Maximum economy changeover.
- · Efficiency monitoring.
- Enabling relay for heat recovery.

## Mixed air damper

Control mixed air damper.

- Maximum economy changeover.
- Minimum position.
- Startup and maximum position depending on the outside air temperature.
- Mixed air damper temperature control at a constant setpoint (economizer).

#### Linear/binary step switch

Control of up to 3 available function blocks, each with 1 **linear** or **binary** step switch with a maximum of 4 relay outputs and 1 analog output.

#### Variable step switch

Control of 2 available function blocks with a **variable** step switch with 6 or 4 steps and one analog output each.

## **Logic functions**

Four freely configurable logic function blocks are available to process multiple logically linked universal input variables.

- Configurable logic functions.
- Adjustable switch-on and switch-off delay and minimum switch-on and switch-off time
- Operating switch (auto, off, on), configurable for manual control.

#### Additional timeswitch

Additional timeswitch with 6 daily switch-on or switch-off times.

• Operating switch (auto, off, on), configurable for manual control.

#### Demand-dependent ventilation (CO<sub>2</sub>/VOC)

Demand-dependent ventilation (CO<sub>2</sub>/VOC), acting on the air dampers or the variable speed/multispeed fans.

#### Frost protection

2-stage frost protection function (modulating/2-position) or frost protection thermostat (heating sequences delivering 100 % output, fans switched off).

• Frost protection and 3 frost protection monitors.

## **Preheating function**

The following preheating functions are available:

#### **Switch-on optimization**

Comfort function Switch-on optimization for heating and cooling.

#### Sustained mode

• Sustained heating and cooling mode during occupied or unoccupied periods.

## **Night cooling**

Night purging during unoccupied periods in the summer.

## Heating/cooling demand

- Output of heat and cooling demand signal (relay and DC 0...10 V).
- Collect, evaluate and forward heat and cooling demand from and via the KNX bus. Can also be configured:
- Modeling output (e.g. for demand-dependent setpoint shift of a refrigeration machine).
- Relay output (e.g. to switch-on/switch-off a refrigeration machine).
- Demand-dependent setpoint shift acting on a primary controller.
- Adjustable setpoint increase for use with primary controller.

#### Switching heating/cooling

If a 2-pipe system (heating/cooling) is used, you can switch heating/cooling via a digital or analog input, via an operating mode switch (auto, heating, cooling), by date or via the KNX bus. The heating/cooling signal can be sent to the KNX bus or issued via a relay.

## Fault messages

Fault indication with red LED, acknowledgement with button.

The following options are available:

- 2 relay outputs as fault message relay.
- 10 universal inputs as fault message inputs.
- 4 predefined fault inputs (filter supervision, fire shutdown, "supply air smoke extraction" and "extract air smoke extraction").

#### **Bus functions**

- Remote operation of KNX functions with RMZ792 bus operating unit.
- Room operator unit with the relevant functions.
- Indication of fault status messages delivered by other devices on the bus.
- Delivery of a common fault status message from all devices on the bus to a fault relay.
- Time synchronization.
- Passing on and adoption of outside temperature signal.
- Common control strategy of a ventilation controller with a heating controller or multiple ventilation controllers to control of the same room.
- Sending or receiving the yearly timeswitch schedule (holidays/special days) from some other controller.
- Sending or receiving the 7-day program or the yearly program for the holidays/special days of any other controller.
- Generating and sending a demand signal (hot water, chilled water) to the primary controller or the hot water/chilled water source.
- Receiving and evaluating refrigeration demand signals if configured as a primary controller or hot water/chilled water source.

Demand control: Exchange of data between primary and VAV individual room control using the following functions via KNX bus:

- Demand-dependent plant operation primary ventilation plant (switch on and off based on load) and demand-dependent supply air temperature control
- Receive and evaluate energy demand signals (heating and cooling)
- Pressure setpoint compensation supply/extract air fan functioning as VAV damper position

#### Universal sending and receiving zones

Device RMU7x0B allows for universal data exchange via own terminals as well as via terminals of extension modules RMZ78x.

Data between devices is exchanged via KNX bus.

Universal inputs, digital and analog outputs of RMU7x0B can be used as sending objects (for sending zones).

Universal inputs of RMU7x0B can be used as receiving objects (in receiving zones).

• Sending zones:

Universal inputs (N.X1...A8(2).X4)

Digital outputs (N.Q1...A8(2).Q5)

Analog outputs (N.Y1...A8(2).Y2)

Receiving zones:

Universal inputs (N.X1...A8(2).X4)

#### Examples of applications not permitted using KNX bus

The following applications or input/output values may not be implemented using universal sending and receiving zones:

- Safety-relevant plants and equipment (e.g. fire alarm off, smoke extraction, frost protection function).
- If request "Simultaneous synchronous start condition of plants" exists.
- Applications where communications failure of sending or receiving zones may cause damage.
- Time-critical control paths or control paths with greater degree of difficulty (e.g. speed control via pressure, humidity).
- Main controlled variables that must be available.
- · Acquisition and evaluation of pulses.

Note

After RMU7x0B power-up, it may take a few minutes until the bus signals are available. This may result in faulty plant behavior in the case of sending and receiving zone applications that are not allowed.

## Service and operating functions

- Display of setpoint and actual values.
- Input terminal simulation.
- Outside temperature simulation.
- Wiring test.
- Data backup.

## Ordering and delivery

When ordering, please provide the name and type reference of the controller, for example,

Universal controller RMU730B-1.

The devices and components listed under listed under "Accessories" must be ordered as separate items.

Each controller is supplied as follows:

- Complete with 5 standard applications plus one empty application each of basic types A, P, C and U (configuration must be adapted)
- Operating languages (see "Type overview")

The following table lists equipment that can be combined with the RMU7x0B and extension modules:

Unit	Type	Data sheet
Passive sensors	All sensors with sensing element	N1721N1846
	LG-Ni1000, Pt1000, T1 (PTC)	N1713
Active sensors	All sensors with	N1821,
	- AC 24 V supply voltage	N1850N1932
	- modulating output DC 010 V	
Monitoring devices	QAF81, QAF64,	N1284, N1283,

Siemens Building Technologies

Each type of controller has 5 applications of ventilation/air conditioning plants preprogrammed. Some of them require extension modules.

When commissioning a plant, the relevant plant type must be entered. All associated functions, terminal assignments, settings and displays will then automatically be activated, and parameters not required will be deactivated.

In addition, each type of universal controller has 4 empty applications loaded:

- 1 for basic type A (ventilation controller).
- 1 for basic type P (primary air handling).
- 1 for basic type C (demand-dependent chilled water controller).
- 1 for basic type U (universal controller).

Using the operator unit RMZ790 or RMZ791, the controller permits:

- Activation of a preprogrammed application.
- Modification of a preprogrammed application.
- Free configuration of applications.
- Optimization of the controller settings.

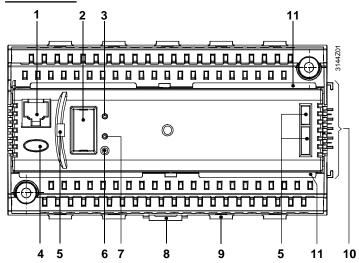

For operating actions of the functions, refer to the Basic Documentation CE1P3150en.

The universal controller consists of terminal base and controller insert. It has a plastic housing with the printed circuit boards, 2 terminal levels and accommodates the connecting elements (electrical and mechanical) for one extension module (refer to "Accessories").

It can be mounted on a top hat rail (EN 60715-TH35-7.5), or on a wall.

The controller is operated either with the plug-in type or detached operator unit (refer to "Accessories").

## Operating, display and connecting elements

Key

- 1 Connection facility for the service tool (RJ45 connector)
- 2 Removable cover with connection facility for the operator unit.
- 3 LED (Run) for indicating the device's operating state: With the following meaning:

LED lit: Supply voltage, no fault in application and periphery LED off: No supply voltage or application fault or periphery.

Button " $\Omega$ " with LED (red) to display fault status message and its acknowledgement.

With the following meaning:

LED blinking: Fault status message, ready to acknowledge
LED lit: Fault status message still pending but not yet reset

LED off: No fault status message.

Press button: Acknowledge or reset fault.

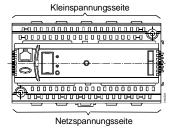

- 5 Openings for plug-in type operator unit RMZ790.
- 6 Programming button "Prog": Learning button to changeover between the normal mode and the addressing mode to assume the physical device address (requires tool to operate).
- 7 Programming LED "Prog" to display normal mode (LED off) or addressing mode (LED on).
- 8 Catch for fitting the controller to a top hat rail.
- 9 Fixing facility for a cable tie (cable strain relief)
- 10 Electrical and mechanical connection elements for extension module.
- 11 Rest for the terminal cover.

#### **Engineering Notes**

- AC 24 V voltage required to power the controller. It must meet requirements for SELV/PELV (safety extra low-voltage).
- The transformers used must be safety isolating transformers featuring double insulation to EN 60742 or EN 61558-2-6. Design of switch-on period: 100 %.
- · Fuses, switches, wiring and earthing must be in compliance with local regulations
- Sensor wires should not be run parallel to mains carrying wires that power fans, actuators, pumps, etc.
- It is recommended to use the standard applications provided. Specific plant situations may require certain adaptations
- Total max. 4 extension modules per RMU7..B can be connected.
   Select from 1 RMZ785, 2 RMZ787 or 2 RMZ788.

- Controllers and extension modules are designed for:
  - Mounting in a standard cabinet as per DIN 43 880.
  - Wall mounting on an existing tophat rail (EN 50022-35x7.5).
  - Wall mounting using two fixing screws.
  - Flush panel mounting.
- Mounting in wet or humid room not permitted. Must have proper ambient conditions
- If the controller is not operated inside a control panel, use the detached operator unit RMZ791 in place of the plug-in type operator unit RMZ790.
- Disconnect the system from the power supply prior to mounting and installation the controller.
- Do no remove controller from the terminal base!
- If extension modules are used, they must be attached to the right side of the controller in the correct order in accordance with the internal configuration.
- Extension modules are not wired to one another or the controller. Electrical
  connections are automatic as of insertion. If it is not possible to arrange the extension
  modules side by side, the first of the detached modules must be connected to the last
  previous module or to the controller using the RMZ780 module connector. In that
  case, the cumulated cable length may not exceed 10 m.
- All connection terminals for protective extra low-voltage (sensors, data bus) are located in the upper half of the unit, those for mains voltage (actuators and pumps) at the bottom.
- Each terminal (spring cage terminal) can only accommodate one solid wire or one stranded wire. Cables must be stripped to 7 to 8 mm to connect. To introduce the cables into the spring cage terminals and to remove them, a screw driver size 0 or 1 required. Cable strain relief can be provided with the help of the fixing facility for cable ties.
- The controller mounted on a top hat rail together with modules can only be removed from the rail after the module directly attached to the controller has been removed
- The controller is supplied complete with installation instructions and operating instructions

#### Commissioning notes

- Using the operator unit RMZ790 or RMZ791, or the service tool, staff trained by HVAC Products and having the required access rights can change the configuration and the parameters online or offline at any time.
- During commissioning, the application is switched off. The outputs are in a defined OFF state. No process and alarm signals are issued on the bus
- The controller restarts automatically after completing configuration
- When leaving the commissioning pages, the peripheral devices connected to the universal inputs (including the extension modules) are automatically tested and identified. An error message is generated if peripheral device is missing
- The operator unit can be removed and plugged in or connected while the controller is operating
- If adaptations to specific plants are required, they must be recorded and the documentation kept inside the control panel.
- For the procedure to be followed when starting up the plant for the first time, refer to the installation instructions.

#### **General notes**

Maintenance The universal controller RMU7..B is maintenance free (no battery changes, no fuses).

The housing may only be cleaned with a dry towel.

Repair The universal controller cannot be repaired on site.

Disposal The universal controller is subject to Directive 2002/96/EG (WEEE, Waste of Electrical

and Electronic Equipment).

"The device is considered electronics device for disposal in terms of European Directive

2002/96/EG (WEEE) and may not be disposed of as domestic garbage.

The corresponding national, legal regulations must be observed and the device must be disposable via the appropriate channels. Observe all local and applicable laws."

## **Connection diagrams**

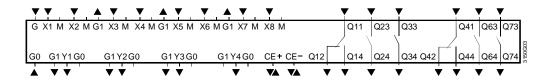

RMU710B

RMU720B

RMU730B

Key G, G0 Rated voltage AC 24 V.

> AC 24 V output voltage to supply external active sensors, detectors, monitors or G1

transmitters.

Measuring neutral for signal input. Μ G0 System ground for signal output. X1...X8

Universal signal inputs for

LG-Ni 1000, 2x LG-Ni 1000 (averaging), T1, Pt 1000, DC 0...10 V,

 $0...1000~\Omega$  (setpoint),  $1000...1175~\Omega$  (rel. setpoint), pulse, contact sensing

(potential-free)

Y1...Y4 Control or status outputs, analog DC 0...10 V.

Q2x/3x/5x/6x/7x Potential-free relay outputs (N.O. contact) for AC 24...230 V Potential-free relay outputs (changeover) for AC 24...230 V Q1x/4x

CE+ KNX bus data line, positive. CE-KNX bus data line, negative.

Notes

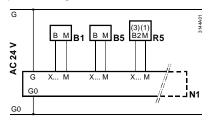

Each terminal (spring cage terminal) can only accommodate one solid wire or one stranded wire. Double terminals are internally interconnected.

## **Connection diagrams**

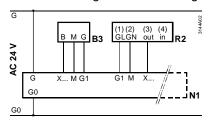

## Examples:

Connections on the measuring side

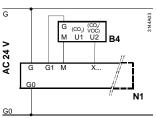

Connection diagram 1: Measuring section with passive main and auxiliary sensors and passive signal source

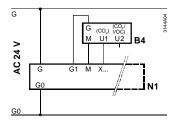

Connection diagram 2: Measuring section with active sensor and active signal source

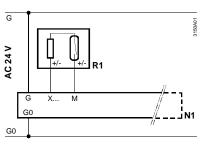

Connection diagrams 3 and 4: Measuring section with CO<sub>2</sub>/VOC- and CO<sub>2</sub> evaluation.

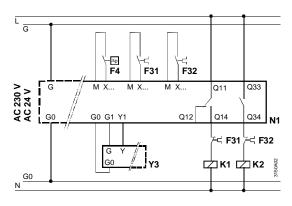

Connections on the control and monitoring side

Connection diagram 5: Measuring section with pulse transmitter

Recommendation: Use shielded wires

## Connection diagram 6:

Legend to the connection diagrams 1 through 6
